Since computers are now less expensive, CMM manufacturers are producing more sophisticated systems. CMMs are available which can store complex programs. Unfortunately, these programs are in proprietary language and cannot be transferred from one machine to another. The Valisys programs are unique in that they will run on several different CMM machines.

THE VALISYS PROGRAM

At this time it is useful to restate the main problem confronting computer integrated manufacturing. It is the difficulty communicating engineering data from product designers to manufacturing engineering to the shop floor. Now, the Valisys Corporation's software, which improves the flow and accuracy of engineering data in a manufacturing environment will be described.

The following is a description of nine Valisys software packages: V:Check, V:Gauge, V:Tolerance, V:Path, V:Interface, V:Inspect, V:Qualify, V:Track, and V:Control.

V:CHECK

This facilitates and validates dimensioning and tolerancing in CAD. The results are greater productivity for designers, fewer design errors and reduced design review periods.

V:Check makes sure that the correct graphic representation of GD&T symbols are picked, using standard CAD methods, and thereby reducing the designer's keyboard input. It also verifies that

automated program requires other types of steps; select probes, determine inspection points, collect and analyze data and report data.

To understand why the CMM-CAD link is so important, it is helpful to review how the CMM works. In all CMMs, a switch, called the probe, is mounted on a mechanism which allows the probe to move along three perpendicular axes. The mechanism contains electronic sensors which continually provide a digital readout, monitoring the position of the probe. When the probe touches a surface of the part being measured, the location of the probe is recorded.

Part of the problem of linking CAD and CMMs is that CMMs from various vendors, differ in the way they analyze inspection data, and thus they produce different analyses of the same part. Although each machine will inspect the same points, the internal processing algorithms which process and report the data, differ from each other.

CAD users are very interested in CMMs which move their probes by means of servo motors. The CMMs generally are controlled by small computers similar to those which operate numerically controlled machine tools. These CMMs can be programmed to follow a predetermined path and stop at selected points to measure those positions on the part being inspected.

The data gathered this way can be stored and analyzed by other computer programs. Programs can be prepared which will automatically accept or reject parts by comparing dimensions taken from CAD data with those acquired by the CMM. If you gather data from a quantity of CMM inspections, they could be used for statistical process control.

MORON SCHEDULE RADIO MORON, that is! RADIO MORON'S next broadcast is scheduled as follows: Monday, February 9th on 6955 KHz at 2300 UTC with a power of 50,000 milliwatts. [info from Niel Wolfish].

RADIO TITANIC'S QSL POLICY. We heard from the operator of RTI that they will now only QSL written reports sent to the Wuppertal and Ytterby maildrops and email reports sent to: Titanic@srs.pp.se. This due to the high cost of postage. You are invited to check out their web site at: <http://www.lls.se/~jal/fr/titanic>.

ACTION RADIO TO RETURN IN 1998 WITH A NEW MAILDROP: A.J. Michaels of Action Radio sends word that Action Radio will return to the air in 1998 after a hiatus of a couple of years. If you hear Action Radio, reception reports may be sent to Post Office Box, 641981, Omaha, Nebraska, 68134.

Action Radio has a brand new website too: <http://www.angelfire.com/ne/actionradio>

RADIO NONSENSE BROADCASTING ON 27500 KHZ Joe Mamma of Radio Nonsense advises that he has begun broadcasting on 27500 KHZ USB due to increased solar activity and improved conditions of the 11-meter band. He will also continue to broadcast on 6955 KHZ USB. He is doing this to test the feasibility of broadcasting on this band. The only problems at present that he can foresee are possible QRM from CBers who want to shoot skip, but this is why 27500 was chosen. It keeps him away from the 27.495 & 27.505 channels. He'll be anxiously awaiting reception reports for these broadcasts. Radio Nonsense will be issuing QSLs for these broadcasts, but they won't be special QSLs, just the same old crappy ones.

Hobby Broadcasting hits the newsstands! Actually, it's not available at every newsstand, but we're about to work on getting copies into Borders & Barnes & Noble. In the meantime, you can subscribe for \$12 (4 issues) with a check or MO (payable to Cabinet Communications at the Mont Alto address). Right now, the premier issue is at the printer & should be back by about the time you read this.

ALTERED STATES WEB PAGE.... William Hurt urges you to check out this page at: <http://www.angelfire.com/vt/alteredstatesradio/> It's no work of art but we will be improving as we go.

Logs marked as "Coe-ON" were made by Alexander, Frodge and Wolfish on a "DXpedition" in Coe Hill, Ontario.

Rich D'Angelo's loggings are from a DXpedition to Gifford Pinchot State Park in central Pennsylvania with Fred Kohlbrenner, George Zeller and Kris Field utilizing a Drake R-8, Datong FL3, JPS ANC-4 and various long wire antennas.

QSLs FROM MONTANA AUDIO RELAY SERVICE:
Dreeble the Martian, verification signer for the Montana Audio Relay Service, passes on word that M.A.R.S. now has 5 QSL designs. M.A.R.S. uses Box 293, Merlin, Ontario, NOP 1WO

And while we're on the subject of QSLs, Joe Filipkowski, the Providence maildrop operator, confirms that Radio Gerbil is indeed using the Providence drop (even though the address given in the program sounds like "Box 28413, Slip Up, Kentucky, 02908").

TESTS FROM SHORT WAVE RELAY SERVICE IN EUROPE. The Short Wave Relay Service is testing almost every day around 2000-2100 on 11515 kHz USB to North America. Also, the following schedule was sent: SUNDAY, APRIL 5TH: 00-1100 UTC 11515 kHz USB SUNDAY, APRIL 12TH: 0900-1100 UTC 11515 kHz USB Stations relayed include: Crazy Wave Radio-Germany, Con Frecuencia-Argentina Silver Radio-Italy and Radio Marabu-Germany. You can contact Steve at the SWRS at email: swrs@usa.net. Their URL is: www.geocities.com/Area51/Station/7568/
